ANDRÉ NICOLAS SILVA

Web Developer | Product, TypeScript, Angular, React, AI & Web Systems

Brazil ▪ devandrenicolas@gmail.com
Portfolio ▪ GitHub ▪ LinkedIn

PROFESSIONAL SUMMARY

Product-focused Web Developer with hands-on experience building and evolving **production SaaS products** used by **10+ companies**, combining web development, backend integration, AI engineering, product thinking, UX, and software architecture.
Strong experience with **TypeScript, JavaScript, Angular, React, Next.js, Golang, REST APIs, SQL, PostgreSQL, and Cloudflare**, working across the product lifecycle from requirements and technical decisions to implementation, refinement, debugging, deployment, and production support.
Experienced in taking ownership of product features and solving problems across application layers, with a focus on **business requirements, user experience, maintainability, performance, and reliable software delivery**.

TECHNICAL SKILLS

Programming	TypeScript, JavaScript, Golang, SQL, HTML, CSS
Product Engineering	Product Thinking, product development, requirements analysis, business rules, UX, feature ownership, scope definition, Agile/Sprints, independent delivery
Web Development	Angular, React, Next.js, Angular Signals, RxJS, Web Components, Lit, Shadow DOM, Tailwind CSS
Backend & APIs	Golang services, REST APIs, internal APIs, frontend/backend integration, service integrations, concurrency, asynchronous processing, automations
AI Engineering	LLM integration, Generative AI, prompt engineering, contextual prompting, input sanitization, structured AI responses, Genkit, AI-powered product features
Code Quality	Code review, automated testing, Vitest, debugging, correctness, maintainability, software reliability
AI-Assisted Development	Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents, SDD, AI-assisted coding, AI-driven development workflows
Data	SQL, PostgreSQL, Supabase, relational databases, data persistence, database migrations, queries
Architecture	Software Architecture, frontend architecture, Component-Based Architecture, Clean Code, separation of concerns, reusable systems
Cloud & Infrastructure	Cloudflare Workers, KV, D1, Durable Objects, edge computing, serverless, CI/CD, Git
Performance	Performance optimization, SEO, Lighthouse, loading performance, usability, production reliability

PROFESSIONAL EXPERIENCE

MSPA — Frontend Engineer (product and web contributions) *Apr 2025 – Present*

SaaS platform for Privacy, Compliance (LGPD), and Digital Auditing

- **Product Engineering & Ownership:** Contributed to the evolution of core SaaS products, including Compass and Trust Center, used by **10+ companies**, taking ownership of product features from requirements and technical definition through implementation, refinement, debugging, and production delivery.
- **Product Development:** Translated business requirements and product needs into production-ready software, contributing to feature scope, technical decisions, UX, business rules, and implementation across different layers of the application.
- **Web Development:** Developed and evolved production web applications using **Angular and TypeScript**, applying component-based architecture, Signals/RxJS, reusable components, and maintainability practices.
- **Backend & APIs:** Worked across application layers involving **Golang services, REST/internal APIs, SQL/PostgreSQL, concurrency, automations, and service integrations**, contributing to end-to-end product functionality rather than frontend-only implementation.
- **AI Product Engineering:** Integrated **Generative AI into production SaaS products**, developing user-facing capabilities with prompt engineering, contextual information, input sanitization, and structured AI responses using **Genkit**, translating product needs into reliable AI-powered features.
- **Software Architecture:** Participated in architectural decisions and implemented solutions involving **Hexagonal Architecture**, component-based architecture, separation of responsibilities, reusable systems, and maintainable application boundaries.
- **Performance & SEO:** Implemented performance and SEO improvements, achieving high Lighthouse scores while improving loading performance, usability, and overall product quality.
- **AI-Assisted Engineering:** Applied an AI-driven development workflow using **Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents, and SDD**, accelerating implementation and iteration while maintaining architectural consistency and code quality.
- **Web Components & Edge Computing:** Developed an agnostic consent engine using **Web Components, Lit, and Shadow DOM**, integrated with **Cloudflare Workers, KV, D1, and Durable Objects** for edge-based execution and distributed functionality.
- **Code Quality & Debugging:** Investigated technical issues across application layers, analyzed implementation behavior, and contributed to reliable solutions through debugging, code review, automated testing, and attention to correctness and maintainability.
- **Engineering Coordination:** Reorganized development workflows during a critical project phase, improving scope clarity, sprint organization, and productivity across a **6-person team**, with direct coordination of 4 team members.

OPEN SOURCE CONTRIBUTIONS

Stoat / Revolt Platforms LTD — Volunteer Frontend Engineer *2026 – Present*

Contribute to the open-source project with a focus on **UX engineering and frontend development**, identifying UX issues and turning them into technical improvements that make the product clearer and more intuitive for users. **Pull request approved by project maintainers.**

PROJECTS

Terto Beats — Digital Platform *Next.js, TypeScript, Supabase, Vercel*

Built a personal digital platform for selling digital products, implementing end-to-end business workflows including the web interface, checkout, state management, data persistence, integrations, and post-purchase automations.

RendeCerto — Financial Web Application *Next.js, TypeScript, Vitest*

Built a financial simulation and calculation application, implementing business rules and calculation scenarios with a focus on accuracy, reliability, and usability. Added automated test coverage to validate results across different scenarios.

Quebrando Fronteiras — Social Platform *Next.js, TypeScript*

Refactored critical user flows in a social platform, focusing on user experience, flow clarity, and conversion improvement.

EDUCATION

Tecnólogo in Internet Systems — UNCISAL (Brazil) *Completed 2026*
