

ANDRÉ NICOLAS SILVA

Frontend Engineer | Product, Angular, React, AI & Web Engineering

Brazil ▪ devandrenicolas@gmail.com ▪ [Portfolio](#) ▪ [GitHub](#) ▪ [LinkedIn](#)

SKILLS

Frontend Engineering: Angular, React, Next.js, Astro, TypeScript, JavaScript, HTML5, CSS3, Signals, RxJS, component-based architecture, componentization, reusable components.

Web Components: Web Components, Lit, Shadow DOM, Custom Elements, framework-agnostic components and reusable systems.

UI & UX Engineering: UX, Product Thinking, accessibility, responsive interfaces, SEO, performance, Lighthouse, user experience, product flows and conversion.

Product & Problem Solving: Requirements, business rules, feature ownership, scope definition, technical decisions, problem solving, refinement and independent delivery.

Frontend Architecture: Component-Based Architecture, separation of concerns, reusable systems, design systems, Clean Code, Software Architecture, Hexagonal Architecture.

AI-Native: Generative AI, LLMs, prompt engineering, contextual prompting, AI-assisted coding, codebase exploration, debugging, testing and AI workflows.

AI in Product: Genkit, LLM features, input sanitization, contextual information and structured outputs.

Backend & APIs: Golang, REST APIs, internal APIs, concurrency, asynchronous processing, event-driven systems, SSE, integrations and automations.

Data: SQL, PostgreSQL, Supabase, relational databases, migrations, queries and persistence.

AI Development Stack: Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents and SDD.

Cloud & Infrastructure: Cloudflare Workers, KV, D1, Durable Objects, edge computing, serverless, CI/CD and Git.

Quality: Vitest, automated testing, code review, debugging, deployment, reliability and maintenance.

EDUCATION

Internet Systems — UNCISAL
Completed in 2026

LANGUAGES

Portuguese — Native
English — Intermediate/Advanced

OPEN SOURCE

Stoat / Revolt Platforms LTD

Volunteer Frontend Engineer (2026 – Present)
UX engineering and frontend development;
pull request approved by maintainers.

PROFESSIONAL SUMMARY

Frontend Engineer focused on **product and problem solving**, with experience building and evolving SaaS products used by **10+ companies**. Specialized in **Angular, React, TypeScript and Web Engineering**, with additional experience in Next.js, Astro, Web Components and Lit, working across UX, frontend architecture, APIs, backend, AI and infrastructure.

I work across the full cycle, from understanding requirements and business rules to architecture, implementation, debugging, refinement and delivery. I combine frontend engineering with an **AI-Native workflow**, using AI to explore solutions, understand codebases, accelerate implementation, review changes, investigate bugs, generate tests and iterate on features while maintaining technical judgment, quality, architecture and maintainability.

PROFESSIONAL EXPERIENCE

MSPA — Frontend Engineer (Product Focus)

Apr. 2025 – Present

SaaS Platform for Privacy, Compliance (LGPD) and Digital Auditing

- **Product Engineering & Ownership:** Contributed to the development and evolution of SaaS products including **Compass, Trust Center and Compliance**, used by **10+ companies**, working from context, requirements and business rules through technical definition, implementation, refinement, debugging and production delivery.
- **Frontend Engineering:** Developed and evolved different surfaces across the MSPA ecosystem using **Angular, React, TypeScript, JavaScript, Astro, Web Components and Lit**, selecting approaches according to the product, technical context and solution requirements.
- **Angular & TypeScript:** Developed and evolved production applications with **Angular and TypeScript**, using Signals/RxJS, component-based architecture, componentization and reusable components to build sustainable and maintainable interfaces.
- **React & Astro:** Worked with **React and Astro** across different MSPA products and surfaces, including applications and institutional pages, applying componentization, UX, SEO, performance and integration with services and APIs.
- **Web Components & Lit:** Developed an agnostic consent mechanism using **Web Components, Lit, Shadow DOM and reusable components**, enabling integration across different applications and frontend contexts.
- **Cloud & Edge Engineering:** Integrated the consent mechanism with **Cloudflare Workers, KV, D1 and Durable Objects**, leveraging edge computing capabilities for execution, persistence and distributed functionality.
- **Product & UX:** Transformed business requirements, business rules and user experience problems into frontend solutions, contributing to product decisions, scope definition, architecture and the evolution of production features.
- **AI-Native Engineering:** Incorporated **Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents and SDD** into the development workflow to explore solutions, understand codebases, accelerate implementation, investigate bugs, review changes, generate tests and iterate on features while maintaining technical judgment and quality.
- **AI in Product:** Integrated **Generative AI into production products**, using Genkit, contextual prompt engineering, input sanitization and structured outputs to develop user-facing AI features with consistent and controlled responses.
- **Full Stack & Systems:** Worked beyond the frontend to investigate and solve problems involving **Golang, REST and internal APIs, concurrency, events, automations and SSE**, connecting functionality across different system layers.
- **Architecture & Engineering:** Participated in architectural decisions and implemented solutions using **Hexagonal Architecture, Component-Based Architecture, separation of concerns and reusable systems**, aiming for clear boundaries, maintainability and safe evolution.
- **Performance, SEO & Accessibility:** Investigated bottlenecks and implemented improvements in **performance, SEO, accessibility and user experience**, using metrics and tools such as Lighthouse to guide production optimizations.
- **Quality & Delivery:** Worked with **Git, code review, automated testing, Vitest, CI/CD, deployment and debugging**, following changes from implementation through investigation and production support.
- **Engineering Coordination:** Reorganized the workflow during a critical project phase, improving scope clarity, sprint organization and productivity for a **6-person team**, with direct coordination of 4 team members.

PROJECTS

Terto Beats — Digital Platform

Next.js, TypeScript, Supabase, Vercel

Personal digital commerce platform with interface, checkout, payment state, persistence, integrations and post-purchase automations.

RendeCerto — Financial Web Application

Next.js, TypeScript, Vitest

Financial simulation application with deterministic business rules and automated testing across different scenarios.

Quebrando Fronteiras — Social Platform

Next.js, TypeScript

Refactored critical flows by identifying UX and product problems, turning them into technical improvements focused on clarity, experience and conversion.
