PROFESSIONAL SUMMARY

Product Engineer experienced in building and evolving production SaaS products used by **10+ companies**, working across frontend applications, backend services, APIs, AI-powered features, and infrastructure. Experienced in translating business requirements into production-ready software, contributing to technical and product decisions, and working across the stack with **TypeScript, Angular, React, Go, SQL, and PostgreSQL**. Focused on end-to-end delivery, software architecture, performance, and maintainability.

Combines full-stack engineering with **AI engineering and AI-assisted development**, integrating LLM capabilities into production products and using Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents, and SDD to accelerate implementation and iteration while maintaining code quality and architectural consistency.

TECHNICAL SKILLS

Full Stack: TypeScript, JavaScript, Angular, React, Next.js, Golang, REST APIs, frontend/backend integration, business workflows

AI Engineering: LLM integration, prompt engineering, contextual prompting, input sanitization, structured AI responses, Genkit

Architecture: Scalable systems, frontend architecture, Clean Code, component-based architecture, Design Systems

Quality & Delivery: Vitest, automated testing, code review, debugging, performance, reliability, Agile/Sprints, backlog organization

Backend & Systems: Go services, internal APIs, concurrency, automations, service integration, distributed systems debugging

AI-Assisted Development: Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents, SDD, AI-driven workflows

Data & Infrastructure: SQL, PostgreSQL, Supabase, Cloudflare Workers, KV, D1, Durable Objects, Serverless, CI/CD, Git

Product Engineering: Product Thinking, UX, requirements, scope definition, stakeholder collaboration, technical decisions

PROFESSIONAL EXPERIENCE

MSPA — Frontend Engineer (Product Focus)

Apr 2025 – Present

SaaS platform for Privacy, Compliance (LGPD), and Digital Auditing

- **Product Development:** Contributed to core SaaS products, including Compass and Trust Center, used by **10+ companies**, translating business requirements into production features focused on usability, performance, and maintainability.
- **Frontend Architecture:** Developed and evolved applications using **Angular and TypeScript**, applying component-based architecture, Signals/RxJS, reusable components, and maintainability practices.
- **Product & UX Decisions:** Built interfaces for complex compliance workflows, translating business requirements into clearer user experiences while contributing to product decisions and technical solutions.
- **AI Engineering:** Integrated AI capabilities into production SaaS products, building user-facing features with **prompt engineering, contextual information, input sanitization, and structured AI responses using Genkit**, improving response consistency, reliability, and usefulness.
- **Full Stack & Systems:** Worked beyond the frontend to investigate and solve issues across **Golang services, internal APIs, automations, concurrency, SQL/PostgreSQL, and distributed systems**, contributing to integrations and backend reliability.
- **AI-Assisted Development:** Applied an AI-driven workflow using **Codex, Claude, Cursor, CodeRabbit, Skills, MCPs, Agents, and SDD**, accelerating implementation and iteration while maintaining engineering standards and architectural consistency.
- **Performance & SEO:** Implemented performance and SEO improvements, achieving high Lighthouse scores while improving loading performance and overall user experience.
- **Engineering Processes:** Reorganized development workflows during a critical project phase, improving scope clarity, sprint organization, and productivity across a **6-person team**, with direct coordination of 4 team members.
- **Web Components & Edge Computing:** Developed an agnostic consent engine using **Web Components, Lit, and Shadow DOM**, integrated with Cloudflare edge infrastructure.

OPEN SOURCE CONTRIBUTIONS

Stoat / Revolt Platforms LTD — Volunteer Frontend Engineer

2026 – Present

Contribute to the open-source project with a focus on **UX engineering and frontend development**, identifying UX issues and turning them into technical improvements that make the product clearer and more intuitive for users. **Pull request approved by project maintainers.**

PROJECTS

Terto Beats — Digital Platform

Next.js, TypeScript, Supabase, Vercel

Built a personal digital platform for selling digital products, implementing end-to-end business workflows including the web interface, checkout, state management, data persistence, integrations, and post-purchase automations.

RendeCerto — Financial Web Application

Next.js, TypeScript, Vitest

Built a financial simulation and calculation application, implementing business rules and calculation scenarios with a focus on accuracy, reliability, and usability. Added automated test coverage to validate results across different scenarios.

Quebrando Fronteiras — Social Platform

Next.js, TypeScript

Refactored critical user flows in a social platform, focusing on user experience, flow clarity, and conversion improvement.

EDUCATION

Internet Systems — UNCISAL

Completed 2026

LANGUAGES

Portuguese: Native ▪ **English:** Intermediate/Advanced (actively improving)
